

## Project Planning Phase

### Project Planning Template (Product Backlog, Sprint Planning, Stories, Story points)

Date	07 November 2022
Team ID	PNT2022TMID51523
Project Name	Emerging Methods for Early Detection of Forest Fires.
Maximum Marks	8 Marks

#### Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint 1	Data Collection	USN-1	Download the dataset in Kaggle for detection of forest fire	20	High	Jose Vasanth A, Jijo K V Maria Vifil Joy S Linson J
Sprint 2	Image Preprocessing	USN-2	Cleaning, transforming, collecting and selection are the processes involved in preprocessing then the images will be improved for detecting the forest fire	20	High	Jose Vasanth A, Jijo K V Maria Vifil Joy S Linson J
Sprint-3	Model building	USN-3	Here, CNN is used to recognize the images. Neural networks are most important technology now a days. Neural networks learn like humans by using labelled data. It is the most effective way to detect forest fire earlier. We have to add the CNN and Dense layers in our model and train the model for prediction.	10	High	Jose Vasanth A, Jijo K V Maria Vifil Joy S Linson J

Sprint-3	Evaluating the model	USN-4	A model behaves after each iteration of optimization. An accuracy metric is used to measure the algorithm's performance in an interpretable way. The accuracy of a model is usually determined after the model parameters.	10	High	Jose Vasanth A, Jijo K V Maria Vifil Joy S Linson J
Sprint-4	Output	USN-5	Build Deep learning model and computer vision Using the IBM cloud.	20	High	Jose Vasanth A, Jijo K V Maria Vifil Joy S Linson J

**Project Tracker, Velocity & Burndown Chart: (4 Marks)**

<b>Sprint</b>	<b>Total Story Points</b>	<b>Duration</b>	<b>Sprint Start Date</b>	<b>Sprint End Date (Planned)</b>	<b>Story Points Completed (as on Planned End Date)</b>	<b>Sprint Release Date (Actual)</b>
Sprint-1	20	2 Days	27 Oct 2022	28 Oct 2022	10	29 Oct 2022
Sprint-2	20	5 Days	30 Oct 2022	03 Nov 2022	10	04 Nov 2022
Sprint-3	20	8 Days	04 Nov 2022	12 Nov 2022	10	13 Nov 2022
Sprint-4	20	8 Days	14 Nov 2022	22 Nov 2022	10	23 Nov 2022

## Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20(points per sprint). Lets calculate the team's average velocity(AV) per iteration unit(story points per day)

$$AV = \text{Sprint duration} / \text{velocity} = 80/40 = 2$$

## Burndown Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.
